

**ODS Metering Systems** has been offering metering solutions for custody transfer flow solutions as an independent EPC contractor since 1950. We offer a unique combination of expertise in mechanical engineering, instrumentation, electrical engineering, software and process automation. With our worldwide branches, we realize complete tailor-made measuring systems for leading energy, chemical and oil and gas companies.

ODS Metering Systems is experiencing structural growth at our Asia Pacific location and is looking for ambitious people who want to work in a dynamic technical environment.

## Are you our Service Engineer for our Asia Pacific region?

As a Service Engineer you are responsible for the on-site work on our flow metering systems for the energy industry. This means that you will have to travel in the Asia Pacific region, often (+/- 50%) of the time.

No matter what or how much happens, you know what to do to make our projects a success. You are perfectly able to manage all the different phases from programming, testing, start-up and full operational support over the complete lifetime of our flow metering systems.

Communication is key, you are a great technician with social skills that make you successful in your job, because you easily switch between all lines of communication with customers, manufacturers and colleagues.

### The most successful candidate:

- ➔ Likes to travel;
- ➔ Has at least 5 years of experience as a Service Engineer;
- ➔ Through experience and/or education you function at Bachelor degree level (mechanical or E&I);
- ➔ Good skills in written and of understanding of the English language.

### This is what we offer you:

- ➔ A flat organizational structure where your opinion counts;
- ➔ Working for a company that attaches great importance to personal development;
- ➔ Good primary and secondary employment conditions;
- ➔ A motivating salary.
